

Technical Troubleshooting Log

Employee Directory Web App

Issue 1: CORS & API Fetch Failure (Network Error)

Error Description: API data fetch karte waqt Browser Console mein network error/CORS error display ho raha tha aur user cards render nahi ho rahe the.

Root Cause: script.js ke andar API endpoint galat / restricted URL par set tha jis wajah se browser CORS policy block kar raha tha.

Solution & Code Fix: API endpoint ko public testing API <https://randomuser.me/api/?results=12> par shift kiya gaya. Network failure ko safely catch karne ke liye try...catch block use kiya gaya.

Screenshot:

kiya gaya taake agar network drop ho toh app crash na kare aur message show ho jaye.

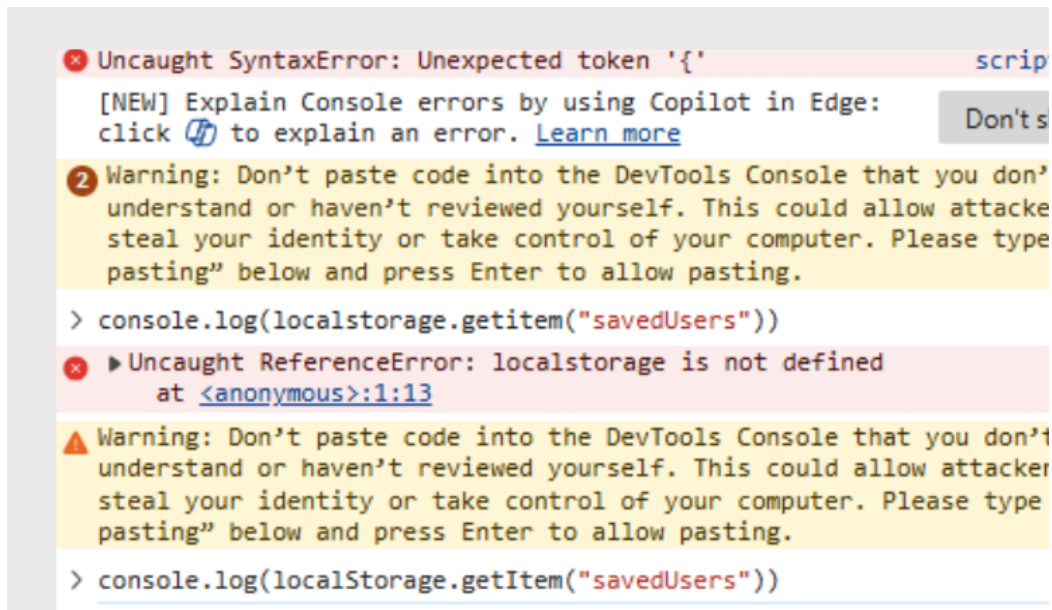

Issue 2: LocalStorage State Persistence Resetting on Page Refresh

Error Description: Save Profile par click karne ke baad button ki state change hoti thi, lekin page refresh (F5) karne par state wapas default ho jati thi.

Root Cause: LocalStorage mein data save karte waqt JSON format conversion nahi ho raha tha, aur saved users ki ID matching logic missing thi.

Solution & Code Fix: Array store karne ke liye JSON.stringify() aur retrieve karne ke liye JSON.parse() implement kiya gaya. Card render ke waqt saved users ki ID check ki gayi.

Screenshot:

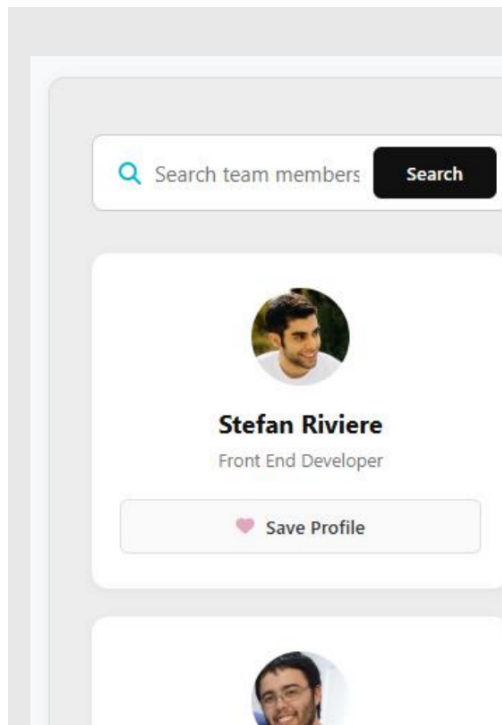

```
function getSavedUsers() {  
  return JSON.parse(localStorage.getItem("savedUsers")) || [];  
}  
  
function toggleSave(id) {  
  let savedUsers = getSavedUsers();  
  if (savedUsers.includes(id)) {  
    savedUsers = savedUsers.filter(userId => userId !== id);  
  } else {  
    savedUsers.push(id);  
  }  
  localStorage.setItem("savedUsers", JSON.stringify(savedUsers));  
  renderCards(usersData);  
}
```

Issue 3: CSS Grid Broken Alignment on Mobile Views

Error Description: Screen resolution kam hone par cards ek doosre ke ooper overflow kar rahe the aur center alignment disturb ho rahi thi.

Root Cause: style.css mein cards-grid ki styling mein hardcoded widths ki wajah se responsiveness properly adapt nahi ho rahi thi. script.js mein unexpected token '{' ka syntax error bhi tha.

Screenshot:

Solution & Code Fix: CSS Grid ki auto-responsive logic implement ki gayi:

```
.cards-grid {  
  display: grid;  
  grid-template-columns: repeat(auto-fit, minmax(220px, 1fr));  
  gap: 20px;  
}
```

Is se layout custom media queries ke bina har screen size par automatically adjust hone laga.
